Form Finder
for the Web

"FormFinder not only allows us to manage and present thousands of XML form applications to our constituents, but also provides simple code-free integration of our XML form applications with our internal systems and databases saving us thousands of hours of programming each year."

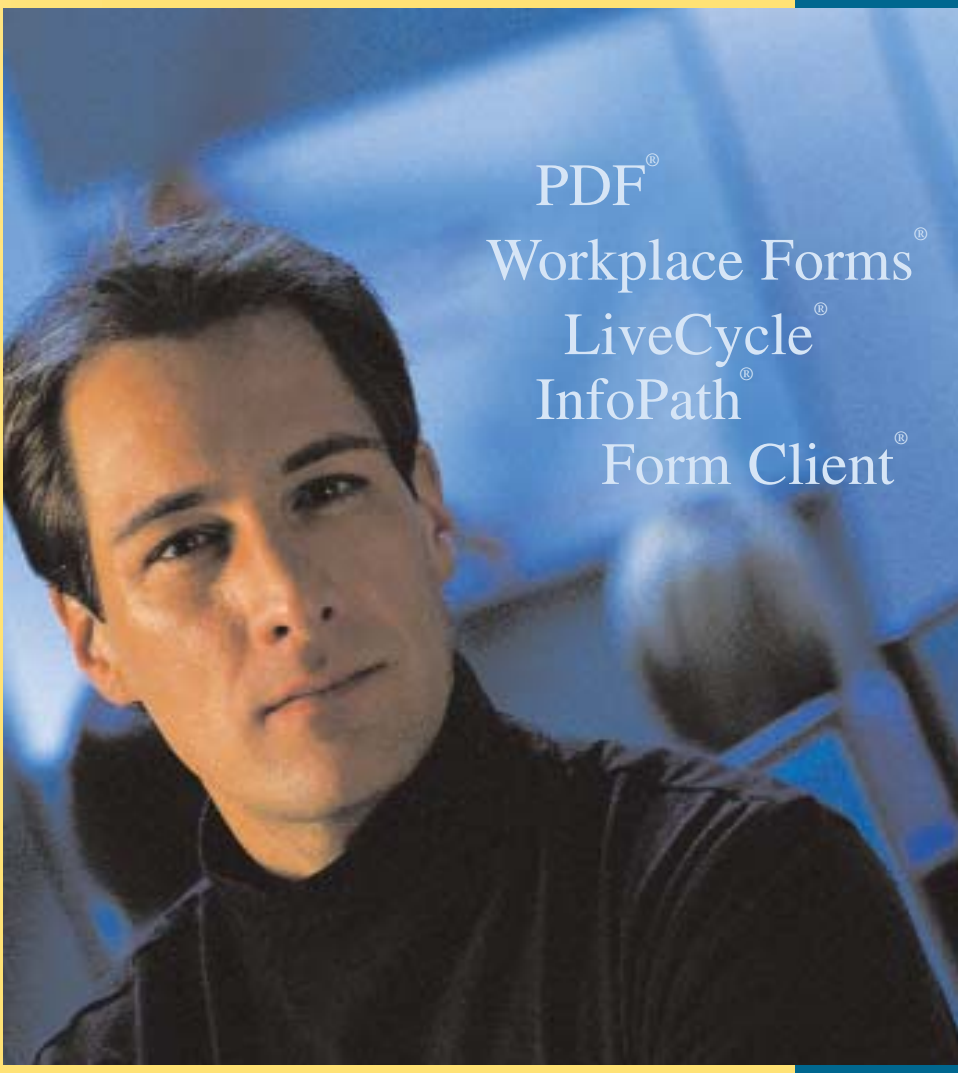
Enhanced Routing Edition

specifically designed to manage structured content and processes for corporate and government organizations



FormFinder for the Web Enhanced Routing Edition provides digital solutions for automating complex processes. Our automated business process tools easily guide an organization through the creation of systems that enforce and manage their digital processes across the enterprise. In addition to full support for leading XML-based digital form technologies, Enhanced Routing Edition also allows interaction with existing enterprise authentication services. It's the total solution to help your organization streamline its processes and reduce operating costs.

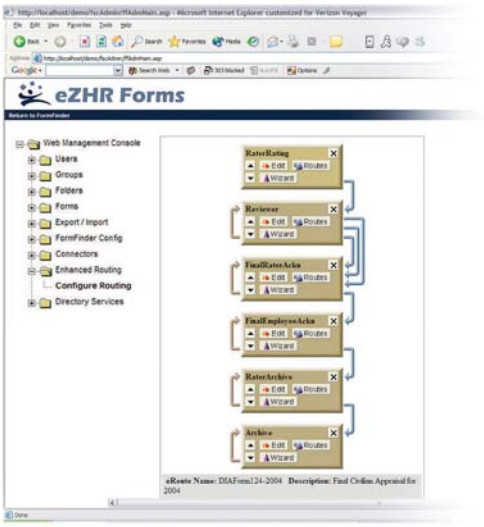
Form Finder for the Web

Managing structured content and processes

FormFinder for the Web is the total solution to help your organization streamline its processes and reduce operating costs. Our FormFinder technology is unique in the marketplace, and has key features and benefits that set it apart, including:

- **Natively supports leading XML form technology including Adobe® PDF®, IBM® Workplace Forms®, Adobe® LiveCycle® Forms, Microsoft® InfoPath® and Adobe® FormClient® technology.**
- **Publishing digital forms and creating tables for SQL®, Oracle®, and DB2® databases across your enterprise with easy-to-use, wizard-style interfaces.**
- **With FormFinder's data connector technology, administrators can both populate and submit information to databases without scripting or coding.**



FormFinder process design.

Authenticate
Controlling access and managing users and groups has never been easier. FormFinder provides built-in user and group management capability as well as integration to directory services and network authentication.

Locate
FormFinder provides many simple ways to locate forms, such as searching by name, number and other descriptors, or last 10 record folder showing the last 10 records accessed.

Populate
Easily pre-populate end-user data into the digital form process saving time and improving accuracy of the data. FormFinder provides for end-user profile population or provides for integration to existing directories or databases.

Submit
Once work is completed, users can submit their work for processing which can initiate many different actions based upon the requirements of the process.

Route
In the Enhanced Routing edition, users can easily select the next person(s) to receive the digital process, or a process can be designed to make that decision for the end user. FormFinder provides an easy-to-use graphical process designer making quick work of developing a complete digital process even supporting multiple digital form technologies within the same process.

Track
The originator or any participant in the process can track the digital process to determine what approvals have occurred and who currently has the record.

Survey
FormFinder provides survey capability so that links can be e-mailed, digital surveys completed, and data compiled for submission or reporting purposes.

Manage
Old records are easily found and new records are automatically created using the chosen form technology and most current digital form.

Integrate
In the Enhanced Routing edition, integrating your digital forms processes into existing legacy databases or applications is easily accomplished (no coding) by using our graphical connector technologies. Choose from our Database, Session, Soap and/or API connector technology.

Report
FormFinder provides out-of-the-box reports for understanding usage trends of your digital forms. In addition, FormFinder provides a graphical Excel® report writer to generate dynamic reports used to manage the digital process.

Management Console
The Management Console is a Web-based utility that allows administrators to publish digital forms and dynamically create database tables and associated links. Administrators can also create a graphical process map that determines the flow of the process through your organization.
